## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 34 is rejected under 35 U.S.C. 103(a) as being unpatentable over Hirose et al., 5,506,162.

Claim 34 reads on a structure such as that taught by Hirose et al., which shows in for example figure 1 an array of "basic cells," which can each be considered to be a "function block," or any group of interconnected cells which performs an identifiable function could also be considered to be a "function block." The wiring layers which interconnect the cells are formed over the array, and must include clock conductors (because clock buffers are discussed with respect to for example figure 29). Any group of clock conductors would meet the functional limitation of "can be electrically interconnected in a custom pattern, " because no specific interconnection is specifically required by the claim language, and because integrated circuit wiring "can be" interconnected (by overlying wiring layers, for example) Multiple clock domains would have been obvious to implement a circuit requiring more than one clock signal, which would include all but the most simple of logic circuits.

Claims 10-33 and 37-43 are allowed.
